Cognition Lab

Lab 11

Introduction

- Read the slides Lab11 that you can find in "Resources/ Labs/ Lab 11". **The introduction has several parts, which are explained in detail in slides 32-48.**
- Please post your Introduction section in the Assignments folder "Lab 11" as "FirstnameLastname_ProjectIntroduction"

References section and In-Text citations

- In your introduction you will need to refer to at least **three** peer-reviewed scientific papers. If your final project is about the Stroop test or the VSTM task, please find three papers in addition to the ones that we read in class.

- An excellent place to look for papers is **scholar.google.com.** Other resources are mentioned in the slides.

- **References section**: You may use Zotero or you may get your references directly from Google scholar. To do so, once you found an interesting paper on Google Scholar, click on the "quotation marks" under the summary (next to the star), choose "APA" from the drop-down menu, and then copy and paste on your paper under the "References" heading. *When you will complete the final project, the References section will be after the discussion and before the appendix.*
- **In-Text citations**: for what concerns the In-Text citations, please refer to the APA formatting guides mentioned last week.
