Cognition Lab

Lab 8

We will write the final paper in the same order used by professional researchers: we will start with the methods and the results, then we will write the introduction, the discussion and finally, at the very end, the abstract.

The final paper needs to be formatted in APA style, the standard for research psychology papers.

Please refer to the guides **Communication_in_Psychology.pdf** (you may find an example paper at the end of the document) and **APASamplePaper.pdf**.
The example in Communication_in_Psychology.pdf is exactly the type of paper we are writing, *a research paper*, but it is a little outdated.
The example in APASamplePaper.pdf is up to date with the APA requirements, but it is a review paper. That means it does not include as many sections as a research paper.

Methods

- Read the slides **Methods.pptx** that you can find in "Resources/ Labs/ Lab 9". Write a full method section
  for your final project (the experiment that you ran). You can also refer to the slides **HowToWriteAProcedure.pptx** that you can find on Sakai under "Resources/Labs / Lab 8".

- For now, title each subsection as **Participants**, **Stimuli**, **Procedure**, **Design**, **Data**. Read the slides carefully.

- Please post your Methods section in the Assignments folder "Lab 9" as "FirstnameLastname_CogLab_Methods"
